

September 15, 2016

Dear friend,

**RE: Rapidflex Performance meets the requirements  
of the EN15814 Standard**

We have the pleasure to announce that Rapidflex was tested and approved as meeting the requirements of the EN15814 Standard.

Accordingly, Rapidflex will be marked with the CE Accreditation shortly.

Rapidflex is a two component Bituminous Liquid Membrane designed for waterproofing foundation walls, roofing and additional civil engineering jobs.

On the year 2008, Rapidflex was granted for the CE Mark Accreditation according to the ETAG05 - The Guideline for European Approval of liquid applied roof waterproofing kit, part 1 and part 2.

We consider these achievements as a major millstone for Pazkar, emphasizing our ongoing commitment to Quality & Standards.

We trust that the new CE Mark will assist you in increasing your marketing activities, placing Rapidflex in a top quality position.

Finally, we thank you for your confidence in our products and as we are heading towards the Jewish New Year, we would like to use this opportunity and wish you a Happy and successful New Year.

Yours,

Dan Solberg  
Marketing VP
